As the name Soil  
Mechanics implies the  
subject is concerned  
with the deformation  
and strength of bodies  
of soil. It deals with the  
mechanical properties  
of the soil materials

and with the application of the knowledge of these properties to engineering problems.

In particular it is concerned with the interaction of structures with their foundation material. This includes both conventional structures and also structures such as earth dams, embankments and roads which are themselves made of soil.
