By Garrett Hering, Reporter, Power and Utilities, S&P Global Market Intelligence. In September, the U.S. solar power industry presented its vision for a "radical transformation" of America's energy landscape over the next decade — one in which solar power provides 20% of the country's electricity mix by 2030, up from less than 3% today.

Solar panels convert the sun's light into usable solar energy using N-type and P-type semiconductor material. When sunlight is absorbed by these materials, the solar energy knocks electrons loose from their atoms, allowing the electrons to flow through the material to produce electricity. This process of converting light (photons) to electricity (voltage) is called the photovoltaic (PV) effect.

Solar energy is radiant light and heat from the Sun that is harnessed using a range of ever-evolving technologies such as solar heating, photovoltaics, solar thermal energy, solar architecture, molten salt power plants and artificial photosynthesis.. It is an essential source of renewable energy, and its technologies are broadly characterized as either passive solar or active solar depending ...

The GCC region is opening up to major solar projects, taking advantage of its sunny climate and large tracts of available land, said S&P Global Ratings, a leader in financial research and analysis. Most of the GCC countries--Bahrain, Kuwait, Oman, Qatar, Saudi Arabia, and the United Arab Emirates--are well placed to benefit from solar power, given their extremely favourable climate and the ample amount of land at their disposal, especially in the sparsely settled desert, S&P Global Ratings ...
