PROBLEM SET 1 - UC

Davis Mathematics

Problem Set 1 Solution

Sketches S-1. You are

Online Library

Solutions To

Problem Set 1

given a graph $G = (V; E)$

with n nodes and

edges. (Perhaps the graph represents a telephone network.)

Each edge is colored either blue or red.

(Perhaps the blue edges are owned by Singtel and the red edges are owned by

M1.) You are also given a parameter k as part of the input.

Solutions To

Problem Set 1

Solutions to Problem Set 1 1-4 Consider the problem of perfectly tiling a subset of a checkerboard (i.e. a collection of unit squares, see example below) with dominoes (a domino being 2 adjacent squares). (a) Show that this problem can be formulated as the problem of deciding whether a bipartite graph has a perfect matching.

Solution to Problem 2, part d. We will present a proof based on parity that XOR is not universal. Consider a finitely nested function of XORs which is ultimately a function of two inputs A and B and any finite number of constants 0 and 1. That is, we define a nested function of XORs to be an expression f drawn from the set $\text{EXPR} = \{0, 1, A, B, \dots\}$
