Adolescent and adult learning We have designed a library of specialised resources to support people with challenged learning abilities to enhance their life long learning and break down barriers. We are helping learners aged 14 to adults to enhance their life skills development, through different areas of Neuroscience.

Adolescent and adult learning | NeuroHeadway

The Adolescent Brain: Still Developing During childhood, the brain busily forms new cells and fibers between these cells, which is thought to contribute to the impressive rates that children learn new

knowledge. The rate of formation of synapses, or connections, between brain cells peaks during childhood but is still higher in teens than adults.

Teens, Neuroscience, and Society - BrainFacts
An individual is typically considered an adult at age 18, although the age of adulthood varies for different legal and social policies. ... Earlier development of the accumbens relative to orbitofrontal cortex might underlie risk-taking behavior in adolescents. The Journal of Neuroscience, ...

When Is an Adolescent an Adult? Assessing Cognitive ...
Malignancies in adolescents and young adults (AYA) pose a challenge for pediatric oncologists and, less frequently, for adult oncologists when it comes to patients' correct clinical management and access to the best possible treatments all over the world. 1 Since the beginning of this millennium, renewed efforts to deal with these issues have been made by lay and medical organizations. 2 ...

Current opinion in behavioral sciences The phase of the lifespan known as adolescence begins around the time of physical puberty and ends with the assumption of adult-like levels of autonomy. Relative to childhood, adolescents are faced with more frequent and complex demands on independent decision-making.

The neuroscience of adolescent decision-making - ScienceDirect

Conclusion Muscle strength and motor function decline in older patients with SMA are constant without periods of slower progression or a plateau phase. The floor effects of the HFMSE preclude its use for long-term follow-up of adult patients with SMA types 1c through 3a. Muscle strength sum scores represent an alternative, feasible outcome measure for adolescent and adult patients with SMA.
